

The Pensteel Range of Composite IBCs

Washed UN Approved Composite IBCs

The definition of a Pensteel washed container:

(1) Pensteel offer IBCs which have had non toxic/hazardous products transported within them, we are unable to collect IBCs which have had a hazardous or toxic chemical as we do not currently hold a hazardous waste license .

(2) Our allied company launder both inner and outer bottle, removing product residues, The ID plates are power washed to remove labels and other identifying markings and the outer cage is washed to remove chemical traces and grime.

(3) Should a bottle be highly stained, or the outer cage be badly damaged, we will exchange the inner bottle or cage to recreate a usable container,

(4) The cage and pallet section of the IBC, if suitable, is pressure cleaned, examined for specification tolerances, cosmetically improved (as much as is

possible) and sent for pressure testing in accordance with UN regulations.

- (5) Our IBCs come with either a metal or plastic runner pallet.
- (6) Each IBC, once pressure tested, has a sequentially numbered tag fitted to the outlet valve, this number is recorded on the front of the IBC together with its re-test date and marked with the testers initials for full traceability.
- (7) Laundering IBCs provides our clients with clean, used containers to an agreed specification, at an agreed price. We do not land fill any IBC.
